WORK EXPERIENCE

Software Engineer

Austin Monks Private Limited

01/2020 - Present

Bangalore, KA

Company focuses on a document management system product called REVV. Revv is your intelligent partner who manages all business documentation.

Achievements/Tasks

- Design and development of smart contract on Ethereum and digital e-signature through Metamask wallet authentication using W3 library in ReactJS for end-users.
- Developed integrated components like Cover-page and Header-Footer for a Document management system.
- Implemented Rich text editor by integrating DraftJS library in ReactJS.
- Successfully build text editor styling toolbar for all possible Font stylings, Font families, Link addition and Background stylings in a text editor using DraftJS.
- Implemented many Lamda services for data transformation and performance enhancement using Python.
- Build high performance and easily code flow for supporting the addition of Dynamic Entities and Annotations in the Document.
- Effectively coded software changes and alterations based on specific design specifications and maintenance.
- Successfully worked at independent levels, while also serving as an effective and enthusiastic collaborator.
- Control and maintain the design standards of the product. Worked on the better architecture of features to get maximum efficiency and performance.
- Developed new features and followed a complete development cycle.

Full Stack Developer

Masai School

08/2019 - 01/2020

Bangalore, KA

Masai School is a 21st-century career-focused coding school.

Achievements/Tasks

- Work on projects that should work for all CRUD operations using HTML, CSS, JS, React, Redux, Python and MySQL.
- Developed almost 15+ projects. Out of which 10+ projects were on CRUD operations and left are Frontend/Static projects.
- Took active part in Brainstorming discussions over real-life problems, performance, efficiency and scalability of products.

SKILLS

HTML5

CSS3

JavaScript

JQuery

Bootstrap

ES6

React

React-Redux

Flask

MySQL

GitHub

Problem Solving

Python

Scrapy

Draft JS

Agile Methodology

Public Blockchain/Ethereum

Solidity/Smart Contracts

MetaMask Authentication

PROJECTS

Fitness Tracker

- The fitness tracker has a login and register option on the main page which takes you to the login and register page. The Register page is for the first time user to register his/her data in the gym and start working outpost it. Once the user register he/she needs to sign in as a user to continue to the routine/activity page.

Virtual Typewriter

- A typewriter is a mechanical device to produce printed characters on a piece of paper by typing individual keys. Introduced in the 1870s, they become widely used for business communications up until the rise of modern-day personal computers in the 1980s. I designed an on-screen modern Typewriter.

Restaurant Bill Generator

- A single-page web project to handle all possible combinations of dishes and their respective prices with quantity to handle bill generation easily at any food outlet. Very easy to select an item that automatically takes the price of it and can easily add a discount on the total amount. User-friendly UI to understand every part of it.

EDUCATION

BTECH (Honour's) (08/2012 - 07/2016)
